

ETHER

GLOBAL TECHNOLOGIES

The first modern broadcast automation platform.
Free for everyone. Built for the future of audio.

SEED ROUND — \$1M+ TARGET

THE PROBLEM

Broadcast automation is stuck in the year 2003.

Every radio station, venue, theme park, and house of worship needs professional audio automation. The tools that exist haven't changed in two decades.

\$40,000+

PER SEAT LICENSING

Software that costs as much as a car — per user, per year. Most operators simply cannot afford to enter.

Windows only

NO MODERN PLATFORMS

Locked to legacy OS. No Mac, no cloud, no remote access. Requires on-site IT infrastructure.

2003 UI

UNCHANGED FOR 20 YEARS

Interfaces so outdated they require days of dedicated staff training just to operate.

Enterprise only

SMALL OPERATORS LOCKED OUT

50,000+ stations and venues have a professional need and a \$0 budget. They are completely ignored.

The result: A \$2B+ market where the majority of potential customers are completely unserved.

A \$2B+ market with no serious new entrant in 20 years.

15,000+

Licensed US
Radio Stations

100,000+

Venues Doing
Background Music

50,000+

Houses of
Worship

\$2B+

Total Addressable
Market

Beyond radio — retail stores, theme parks, hotels, podcasters, and live event venues all need professional audio automation. The incumbent tools serve none of them.

The last major innovation in broadcast automation software was in the early 2000s.

No one has tried to fix this. Until now.

Ether — Professional broadcast automation. Free for everyone.

Cross-platform

Mac, Windows, and Linux. No vendor lock-in, no IT department required.

Modern interface

Designed for 2025. Intuitive enough for a volunteer, powerful enough for a pro.

Full automation

AI-assisted scheduling, live assist decks, voice tracking, spots, announcements.

Free forever

Core product is and always will be free. No trial period, no feature gates.

Cloud-ready

Remote dashboard, cloud backup, streaming management — all built in.

Open ecosystem

Import from legacy systems like NexGen and ENCO. No migration friction.

Free to use. Multiple paths to revenue.

The free tier is the growth engine. Revenue comes from the services growing stations actually need.

FREE	PRO	STATION
\$0 / mo per month	\$10 / mo per month	\$49 / mo per month
• Full automation software • 3 audio decks + mic • Local scheduling & clocks • Song library (unlimited) • Basic play logging	• Everything in Free • Cloud backup & sync • Remote web dashboard • PDF traffic reports • Priority support	• Everything in Pro • Multi-user accounts • Streaming infrastructure • Advanced analytics • White-label option
ADDITIONAL: Streaming relay fees · Enterprise custom contracts · Marketplace for jingles & drops · API access		

The freemium flywheel.

Free removes every barrier to adoption. The economics are identical to Spotify, Figma, and Slack.

1. Install free

Zero friction download. No trial, no credit card, no sales call.

2. Grow dependent

Daily use builds deep workflow integration. Switching cost climbs.

3. Hit a ceiling

Cloud backup, remote access, or multi-user triggers Pro upgrade.

4. Convert to paid

Even 5% conversion at 50,000 users = 2,500 paying stations.

5. Revenue compounds

Subscriptions are sticky. Annual churn on mission-critical tools is low.

BACK-OF-NAPKIN MATH:

50,000 free users x 5% Pro conversion x \$10/mo = \$25,000 MRR from Pro alone — before Station tier or enterprise.

No real competition.

The incumbents are asleep.

	Ether	WideOrbit	RCS NexGen	Natural Log	Spotify/Manual
Price	Free	\$40,000+/yr	\$35,000+/yr	\$25,000+/yr	\$0 but limited
Platform	Mac/Win	Windows only	Windows only	Windows only	Any
Modern UI	Yes	No	No	No	N/A
Automation	Full	Full	Full	Partial	None
Cloud	Yes	Add-on	No	No	Partial
Target market	All	Enterprise	Enterprise	Mid-market	Hobbyist
Last major update	2025	2019	2018	2017	Ongoing

KEY INSIGHT: The incumbents' customers are locked in by switching cost, not satisfaction. Their NPS scores are notoriously poor.

Distribution-first.

The product is the marketing.

Community Radio Networks

Direct outreach to NFCB, Pacifica, LPFM communities. These operators share tools openly.

YouTube & Creator Economy

Tutorial content targeting the 500K+ audio producers looking for professional tools.

Venue & Hospitality

Partnership with POS and venue management platforms. Background music is a daily pain point.

Word of Mouth

Radio people talk. One station manager's recommendation reaches 10 colleagues.

Legacy Migration

NexGen/ENCO import tool specifically designed to make switching painless.

What \$1M+ builds.

Engineering & Product	\$400K
Full-time dev team. Mobile app, cloud infrastructure, streaming relay network.	
Sales & Marketing	\$250K
Community outreach, content creation, conference presence, partnerships.	
Infrastructure & Cloud	\$200K
Servers, CDN, backup systems, streaming relay capacity.	
Operations & Legal	\$100K
Compliance, licensing, entity structure, accounting.	
Reserve	\$50K
Working capital buffer.	

We're raising \$1M+ to open broadcast to everyone.

This seed round funds 18 months of runway to reach product-market fit, build the user base, and establish recurring revenue before a Series A.

- | | |
|----------|--|
| Month 3 | Public launch. 1,000 active installs. |
| Month 6 | 500 Pro subscribers. \$5K MRR. |
| Month 9 | Mobile companion app. Partnership with 2 radio networks. |
| Month 12 | 5,000 installs. \$25K MRR. Series A preparation begins. |
| Month 18 | 10,000+ installs. \$75K+ MRR. Category leader. |

The broadcast automation market hasn't had a challenger in 20 years.
Ether is that challenger. And we're giving it away.
